

ROAD SAFETY TRAINING PROGRAM

The Road Safety Program, initially established by the UN as a field-level intervention, offers standardised and high-quality road safety training aimed at reducing road crash risks—the leading cause of casualties in the aid sector.

We are proud to continue this important initiative under Toyota Gibraltar Stockholdings (TGS), the stocking arm of Toyota's Direct Sales Scheme dedicated to serving the UN, NGOs, and Governmental Organisations.

QUALITY ASSURANCE

Our training methods, content, and processes have been independently reviewed by subject matter experts from the Royal Society for the Prevention of Accidents (RoSPA). Their assessment ensures the relevance, appropriate level, and adherence to the highest standards of trainer competence and course quality.

PROVEN TRAINING METHODS

Our program stands out as the only one within the aid sector designed to build sustainable internal capacity and specifically reduce road crash risks in low and middle-income countries. By leveraging behavioral training methodologies refined since 2014, we effectively transform negative driving behaviors into positive habits, cultivating better awareness and a sense of responsibility among drivers.

DIVERSE LEARNING PORTFOLIO

We offer a comprehensive range of courses tailored to meet your specific needs, all of which can be delivered using light or civilian armoured vehicles. Our training portfolio includes:

- Level 2 Advanced Safe Driver Training (ASDT) •
- Level 3 Qualified Driver Trainer (QDT) •

*All courses are available in Arabic, French and English, and for light and armoured vehicles.

As authorised by the UN System Staff College and carrying the RoSPA 2022-2024 Course Assurance logo, we issue certificates under license from UNSSC, ensuring the utmost credibility and recognition.

ALIGNED WITH UN STANDARDS

Our Road Safety Training Program aligns with Annex XVI of the latest version of the UN Security Management Operations Manual (SMOM), meeting its requirements. Additionally, TGS fulfills the SMOM definition of professional trainers, delivering the UNSSC-developed program and gaining RoSPA assurance.

MAIN OUTPUTS

Choosing our program brings several benefits to your organisation:

- Safety: By effectively reducing road crash risks, we ensure the safety of your personnel and the communities you serve.
- Efficiency: Improved driving habits lead to reduced wear and tear, increased mileage, and eco-driving practices, enhancing operational efficiency.
- Passenger Comfort: Drivers trained under our program exhibit smoother control inputs and better hazard perception skills, providing passengers with a comfortable journey.

LEVEL 2 ASDT

Our ASDT course, developed specifically to address the high risk of road crashes faced in challenging driving contexts, focuses on standardised, behavior-based training for sustained impact. The comprehensive training includes advanced driving theory, practical handling, and in-car coaching in both urban and rural settings, ensuring the development and maintenance of safe driving behavior.

ASDT QUALIFICATION STANDARD

To qualify, drivers must meet five performance objectives, equipping them with the proficiency to safely, efficiently, and comfortably transport passengers and goods in light vehicles or armoured vehicles:

- Safe Driver: Analysing driving behavior, mitigating personal risk factors, and continuously improving driving style and habits.
- Safe Journey: Conducting roadworthiness checks, preparing for safe journeys, and effectively managing journey risks.
- Safe Progress: Applying the system of vehicle control in diverse road, traffic, and weather conditions to ensure safe, efficient, and comfortable progress.
- Safe Control: Precisely placing the vehicle, maintaining grip, stability, and using the correct position, speed, and gear.
- Urban and Rural Driving: Integrating all competencies to navigate road and traffic conditions with skill, confidence, and responsibility.

LEVEL 3 QDT

Our QDT course emerged as a sustainable and cost-effective solution to mitigate road crash risks. It equips participants with the skills, knowledge, and attitudes necessary to instruct, coach, and assess advanced safe driver training.

Using proven behavior-based, client-centered techniques adapted to the aid sector context, the QDT course utilises the Roadcraft handbook, originally designed for safer emergency services drivers.

QDT QUALIFICATION STANDARD

Qualified Driver Trainers (QDTs) possess the following capabilities:

- Level 2 Advanced Safe Driver qualification at a 'fully proficient' level.
- Methods of Instruction: Delivering ASDT knowledge and skills lessons effectively in both classroom and vehicle settings.
- Methods of Coaching: Demonstrating effective in-car and on-road coaching techniques.
- Methods of Assessment: Consistently assessing driver proficiency in an effective and comprehensive manner.
- Methods of Delivery: Efficiently planning, administering, and delivering ASDT sessions.

CAPACITY DEVELOPMENT AND ONGOING SUPPORT

Building internal capacity to deliver standardised and effective driver training plays a pivotal role in reducing road crash risks. Our program provides the flexibility to train personnel as needed, fostering mentorship and encouraging safe driving habits on an ongoing basis.

QDTs are qualified for three years, benefit from ongoing technical support, certification services, and access to ASDT online training modules. Various re-certification options are available, eliminating the need for repeating the entire course.

ALIGNED WITH UN & INTERNATIONAL STANDARDS

UN guidance on driver training (UNSMS SMOM Ch XX) recognises QDT-qualified trainers as certified to deliver training to UN staff members.

By choosing our program, you align with international standards and ensure that your training is recognised by the UN.

Don't compromise on road safety - join us in creating a safer future through effective driver training.
